                                                                                                                          The invention relates to a method for in vivo panning of a library to identify molecules that specifically home to a selected organ. The method is useful for screening large numbers of molecules, e.g. peptides to identify those that can home to selected organs. It can facilitate recovery or identification of the molecule. The present sequence is a kidney homing peptide derived form phage peptide display library. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or lymphangiogenesis, is produced by cyclizing a peptide loop fragment
from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel monomeric monocyclic peptide, used to interfere with angiogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a
                              Obtaining molecule that homes to selected organ involves administering library of diverse molecules to subject, collecting the sample of the selected organ, and identifying the molecule.
                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                               ö

beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and peptide loop fragment from an exposed loop of a growth factor protein and cyclishing the peptides by oxidiaing the periods me exposed loop of a growth factor protein and peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis, conversion or lymphangiogenesis in a mammal with a condition or lymphangiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, heat or condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or crauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive crauma, substance-induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vice with at least one biological activity induced by VEGF, VEGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

                                                                                                                                                                    amelioration of a disease or disorder associated with: aberrant B lymphocyte stimulator (BLyS), BLyS receptor expression or activity; cells of hematopoietic origin; or proliferative disease; and reducing, inhibiting or stimulating immunoglobulin production. B cell proliferation and graft rejection involving administration of BLyS binding polypeptides are used in the treatment, prevention or amelioration of diseases such as immune system diseases, proliferative diseases of cells of hematopoietic origin, graft rejection, allergies, infectious diseases, arteriosclerosis, inflammatory disorders, hypergammaglobulinaemia, blood clotting disorders, inflammatory disorders, hourodegenerative diseases. The potential sequence is a Blymphocyte stimulator protein binding peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B Lymphocyte Stimulator protein; B Lymphocyte Stimulator binding peptide; BLyS; biological fluid; serum; plasma; lymph; blood; urine; spinal fluid; synovial fluid; saliva; mucus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g.
reversibly or irreversibly. The binding peptides are used in detection, isolation and/or purfication of BLyS in a solution such as water or a buffer solution, as well as any fluid and/or cell obtained from an individual biological fluid, body tissue, body cell, cell line, tissue culture or other source containing BLyS or BLyS-like polypeptides. The biological fluids include sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, saliva and muccus. Sequences ABG33406-33415, ABG33423-a33875, ABG33888-33848-33850 and ABG33852-33862 represent BLyS binding peptides of the invention
                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                        Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1375.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.

contributing adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cangiogenesis in a mammal, inhibiting obestly in a mammal, inhibiting stimulating blood vessel regression in a mammal, enhancing delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of foreign canderin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for cor reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

chancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

angiogenesis in a mammal inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing dudy delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vacopermeability in a mammal. Heay can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, are products can also be used for treating eclerosis and diabetes. The

products can also be used for treating electors and in bioreactors.

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

conclassing delivery of a drug through the skin of a mammal,

conclassing delivery of a drug through the skin of a mammal,

conclassing cells, preventing or treating a cancer in a mammal, inhibiting

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

con reducing scar tissue, or enhancing adhesion of foreign tissue in a

conclassical cadherine, multiple sclerosis and diabetes. The

corrector an also be used for treating e.g. psoriasis, arthritis, age

conclusion and also be used for treating e.g. psoriasis, arthritis, age

conclusion and also be used for treating e.g. psoriasis, and in bioreactors.

Sequence 1799, Application US/09839542B
Sequence 1799, Application US/09839542B
Patent No. 656996
GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Symonds, James Matthew
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 100086.407D1
CURRENT APPLICATION NUMBER: US/09/839,542B
CURRENT FILING DATE: 2001-04-20
NUMBER OF SEQ ID NOS: 4052
SOSTWARE: PATENTIN Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3971, Application US/09839542B

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
-:- SUBCELLULAR LOCATION: Secreted.
-:- DEVELOPMENTAL STAGE: First appears in the ovarian follicles furing vitellogeneels. Accumulates in the occytes before being secreted during fertilization. Expression continues in the embedded occyte.
Accumulates in the egg capsule after fertilization.
-:- MASS SPECTROMETRY: WW=596.6; METHOD=MALDI; RANGE=1-6; NOTE=Ref.1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -i- FUNCTION: Activates the expression of the trpBA genes encoding the two tryptophan synthase subunits. In the absence of the inducer (indoles] Yeerol phosphate), trpl binds upstream of the trpAB operon, overlapping its own promoter region.
-i- SIMILARITY: Contains 1 HTH lysR-type DNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       THYL BOMOR STANDARD; PRT; 3 AA.

WPI; 2001-442248/47.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFO (vescular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a Claim 49; Page 32; 102pp; English. residues.

```
ö
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis, neovascularisation or lymphangiogenesis, head and the condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-17; cadherin-18; cadherin-12; cadherin-14; cadherin-15 T-cadherin; PB-cadherin; cadherin rated neuronal receptor; LI-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;
                                                                                                                                                                                                                hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal accountion characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic or brain. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. Or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1374.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0;

The present interaction describes cauncing montaining and percent of the present interaction (CAR) sequence. The MAs can be used for modulating concretion (CAR) sequence. The MAs can be used for modulating concretion of nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a conformation delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, conformation delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cappensis in a mammal, enhancing delivery to the contral nervous system, treating a demyelinating drug delivery to the contral nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adherino of for nonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAV6652 to AAV64512 represent specifically claimed peptides, and cappendent of the product of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                             The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug the a tumour in a mammal, treating cancer in

can mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

can angiogenesis in a mammal inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal. Hely can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple solerosis and diabetes. The

products can also be used for detection and diagnosis and in bioreactors.

The present introduction describes cauntrin modutating agencia (PA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating

conclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

confidence of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

cangiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, shibiting

confortable of the confidence of a mammal, enhancing aduly delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

c. g. enhancing or directing neurite outgrowth, facilitating wound healing

cr reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

cr reducing scar tissue, or enhancing adhesion and diabbetes. The

products can also be used for treating e.g. psoriasis, arthritis, age

creating advernance of detection and diaphotes. The

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating of the comprision of nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, subacting call, preventing obesity in a mammal, stimulating central nervous system, treating a demyelinating neurological disease, contral nervous system, treating a demyelinating adhesion of increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, according scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, according to a mammal. They can also be used for treating e.g. psoriasis, arthritis, according to an also be used for treating e.g. psoriasis, and in bioreactors. AAY66522 to AAY64512 represent sequences used in AAY64513186 represent sequences used in
             Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-8; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; Cadherin; protocadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmocallin; desmocallin; desmocallin; alcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cadherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New cadherin modulating agents, used for modulating nonclassical canediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 25; DB 3; Length 6;

To isolate genes that are overexpressed in prostate cancer, the derived from prostate cancer itssues. The prostate cancer issues or the superession Subtractive Hybridisation (SSM) method was used, using cDNA derived from prostate cancer itssues. The present poptide is the N-myristorylation site sequence present at position 218-223 in human

The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

cecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

command, enhancing delivery of a drug through the skin of a mammal,

cenhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

compressing cell, preventing or treating obesity in a mammal, stimulating

compressing cell, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor e.g. enhancing or directing neurite outgrowth, facilitating wound healing

or reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

cor an also be used for treating e.g. psoriasis, arthritis, and

cor products can also be used for treating e.g. psoriasis, and subcreactors.

AAV66532 to AAV64572 represent specifically claimed peptides, and

cor have are inventioned invention and diagnosis and in bioreactors.

AAV66531 to AAV64572 represent specifically claimed peptides, and

cor have are also be used for AAV6453186 represent sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                    Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-8; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin cadherin related neuronal receptor; Li-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;
Cadherin-related neuronal receptor CAR cyclic peptide SEQ ID NO:3573.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 102; Page 217; 252pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20-JAN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic
```

```
The invention provides synthetic antiinflammatory peptides derived from interleukin-2 (IL-2). They can be used for inhibition of adhesion of activated T-cells to ECM proteins such as fibronectin, laminin, collagen type-IV; inhibition of chemotactic migration of T-cell through ECM proteins preferably fibronectin; inhibition of cytokine or mitogen induced T-cell proliferation; inhibition of cytokine or mitogen induced T-cell proliferation; inhibition of e.g. IL-8 IL-1beta) by preferably TNF-alpha induced cytokine secretion (e.g. IL-8 IL-1beta) by stimulated T-cells and intestinal epithelial cells. The anti-inflammatory collection and/or alleviating chronic or acute inflammatory disorders and autoimmune diseases such as rheumatoid arthritis, diabetes type-I, multiple sclerosis, systemic lupus erythematosus, bowel inflammation, cueitis, and Crohn's disease. Sequences AAV85366-374 represent modified anti-inflammatory derivative peptides derived from the IL-2 derived anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic antiinflammatory peptide derived from IL-2 and its derivatives useful for treating inflammatory autoimmune diseases such as rheumatoid arthritis, multiple sclerosis and systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating

conclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

central candelivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

concrassing vasopermeability in a mammal. They can also be used for

concrassing or directing neurite outgrowth, facilitating wound healing

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

crelated macular degeneration, multiple sclarosis and diabetes. The

products can also be used for treating e.g. psoriasis, arthritis, age

crelated macular degeneration, multiple sclarosis and diabetes. The

AAY660592 to AAY6472 represent specifically claimed peptides, and

AAX66573 to AAX64673 to AAX33183 to AAX33186 represent sequences used in

che exemplification of the present invention

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

comprising peptides which comprise a nonclassical cadherin cell adhesion

comprising cadherin-mediated functions. They can be used for addulating adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, companient of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting angiogenesis in a mammal, inhibiting cancer in a mammal, inhibiting central nervous system, treating a demyelinating neurological disease, central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for reating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The
                                                                                                                         Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-12; cadherin related neuronal receptor; LI-cadherin; pprotocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                Cadherin-15 cell adhesion recognition cyclic peptide SEQ ID NO:2154.
                                                                                                                                                                                                                                                                                                                                                                               Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 60; Page 188; 252pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAR49769
                                                                 AAR1577
                                                                                         ઠે
                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a peptide fragment derived from domain 1 of human beta-2 glycoprotein, a phospholipid binding serum protein. Isolated domain 1 of beta-2 GPI protein binds to and inhibits beta-2 GPI-dependent antiphospholipid antibodies. The fragments are useful as toleragens when they bind to the antibodies at the surface of a B cell and triggers B cell anergy. The polypeptides and mimetics can be used for treating disorders associated with beta 2GPI-dependent aPL-associated pathologies, e.g. thrombosis, recurrent foetal loss, thrombocytopenia or autoimmune diseases such as systemic lupus erythematosus. The polypeptides can also be used to detect and purify antibodies. They can also be used in
products can also be used for detection and diagnosis and in bioreactors. AAX60592 to AAX64572 represent specifically claimed peptides, and AAX64531 to AAX6453 and AAX33183 to AAX33186 represent sequences used in the exemplification of the present invention
                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                            Human beta-2 glycoprotein I; beta-2 GPI; toleragen; B cell anergy; beta-2 GPI-dependent antiphospholipid antibody; thrombosis; recurrent foetal loss; thrombocytopenia; autoimmune disease; systemic lupus erythematosus; coagulation assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated domain 1 beta-2 GPI polypeptides, used for inhibiting antiphospholipid antibodies for treating, e.g. thrombosis.

This peptide or the peptides represented in AAR15751-81, AAR14723 and AAR14711 inhibit the rat FTB represented in AAR14712-22. They show FT inhibition at an ICSO of 0.01-10 microom. The most potent inhibitors are ones in which phenylalanine occurs at the third position of a tetrapeptide whose N-terminus is cysteine. The inhibitors have a farnesyl acceptor or inhibitor sequence within its structure and are capable of inhibiting the farnesylation of p21ras by FT. See also AAR14711-23 and AAQ14541-47. (Updated on 09-003-003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)

AAR77800, AAR77805-R77838 are tetrapeptide inhibitors of farnesyl transferase. They all obey a generic formula for the C-terminal sequence of 4-10 amino acid inhibitory peptides; the formula is -CAAX, where C=cysteine, A= any aliphatic, aromatic or hydroxy amino acid and X= any normal amino acid. Farnesyl transferase is involved in the farnesylation of various cellular proteins including the cancer related ras proteins. The transforming activity of ras is dependent on the localisation of the protein to membranes, a property which is thought to be dependent upon the addition of farnesyl groups. The peptide inhibitors are useful for treating cancers and ras-related cancers in particular. (Updated on 25-
New farnesyl transferase inhibitor peptide(s) - based on farnesyl acceptor substrate carboxy terminal sequences, used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW04433-W04465 are peptide inhibitors of farnesyl transferase (FT) activity. The peptides block the attachment of prenyl groups to ras proteins in malignant cells of patients suffering from cancer or a precancerous state and as such are used to treat cancer. The peptides were identified by determining the ability of candidate substances to inhibit a FT enzyme, by inhibiting the transfer of a farnesyl moiety t
                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Assay for farnesyl transferase activity - by determining ability to transfer farnesyl moiety to K-Ras B protein, partic. useful for identifying inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Farnesyl transferase; inhibitor; cancer; tumour; neoplasia; prenyl; ras protein; K-ras B; malignant; detection; identification.

US-10-136-035-4046

Sequence 4046, Application US/10395032

Publication No. US20030229199A1

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Symonds, James Matthew

APPLICANT: Gour, Barbara J.

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

FILE REFERENCE: 100008, 407C9

CURRENT APPLICATION NUMBER: US/10/395,032

CURRENT FILING DATE: 2003-03-21

GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
APPLICANT: GOUR, BAIDAR J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REPERENCE: 100086,407C1
CURRENT APPLICATION NUMBER: US/09/187,859A
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 4052.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   APPLICANT: Blaschuk, Orest W.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1798, Application US/09839542B

Patent No. 656996
GENERAL INFORMATION;
APPLICANT: Blaschuk, Orest W.
APPLICANT: Symonds, James Matthew
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 100086.407D1
CURRENT APPLICATION UNDERR: US/09/839,542B
CURRENT FILING DATE: 2001-04-20
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: PATENTING DATE: 2001-04-20
NUMBER OF SEQ ID NOS: 4052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTHER INFORMATION: Representative cyclic modulating agent based on CTHER INFORMATION: cadherin-12 cell adhesion recognition sequence US-09-839-542B-1798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ; OTHER INFORMATION: Representative cyclic modulating agent based on ; OTHER INFORMATION: PB-cadherin cell adhesion recognition sequence US-09-187-859-4046

; Sequence 4040, Application US/09839542B
; Patent No. 656999
; Patent No. 6569996
; GENERAL INFORMATION:
; APPLICANT: Symonds, James Matthew
; APPLICANT: Symonds, James Matthew
; APPLICANT: Gour, Barbara J.
; TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
; TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
; TITLE REFERENCE: 100086.40701
; CURRENT APPLICATION NUMBER: US/09/839,542B
; CURRENT FILING DATE: 2001-04-20
; NUMBER OF SEQ ID NOS: 4052
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 4040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: Representative cyclic modulating agent based on CTHER INFORMATION: PB-cadherin cell adhesion recognition sequence US-09-839-542B-4040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: BROWN, MICHAEL S.
